

Nonlinear Dynamical Economics and Chaotic Motion

The book provides a survey of recent developments in nonlinear economic dynamics. Bifurcation theory and the emergence of chaotic motion in dynamic economic models is presented in a comprehensive and accessible though nevertheless thorough style. The reader can use the book as an introduction to nonlinear economic dynamics and as a reference to more advanced material. The major changes made in the second edition include a re-organization of parts of the text, a deepening of several mathematical concepts, and descriptions of a larger number of economic applications. As in the first edition, special emphasis is put on the didactical presentation of the new material.
