

ICT Adoption and Application in the Malaysian Public Sector

Information and Communication Technologies hold great potential in facilitating public services; however, one of the main problems in applying ICT systems successfully lies in users behavior. Before ICT can be fully assimilated into the public domain, it will first be necessary to successfully conciliate users to their adoption. ICT Adoption and Application in the Malaysian Public Sector aims to resolve the difficulties in applying practical ICT systems within the public sphere, thoroughly addressing disparities in ICT theory, user attitudes, and the underlying factors that hinder the full adoption of ICT systems. This publication is a valuable resource for policymakers, software developers, policy analysts, academic researchers, and students interested in the field of ICT.
